

How to deal with the photovoltaic panel light not lighting up

Overview

Most solar light failures are caused by dirty panels, dead batteries, or water damage. For persistent issues, reset sensors or check wiring connections. Check your solar panel first—nine times out of ten, dirt, leaves, or shade are blocking the sunlight your fixture needs to charge. I learned this the hard way when my entire pathway lighting system “died” last fall, only to discover a thin film of pollen had cut charging efficiency by 70%. The lifespan of solar lights' rechargeable batteries is typically 300-500 charges, and a decrease in light duration can indicate it's time to replace them. Let me walk you through each issue and show you exactly how to fix them—plus, I'll share. If your solar lights have stopped working, the fix is usually simple — and it won't cost you much.
