

# How to use the solar power generation system at night

## CONTAINER TYPE ENERGY STORAGE SYSTEM

Energy storage system

FC RoHS CE 

## Overview

---

Quite frankly, no -- solar panels work only when there's sunlight to convert into electricity. Even on nights with strong moonlight or starlight, these illumination sources won't make a difference. You're wondering how you can utilize solar energy from solar panels at night. Well, it's possible because excess energy generated during the day is stored in batteries or accumulated as net metering credits. You can power your home at night. Thanks to a new breakthrough, this is no longer a fantasy — scientists have created a photovoltaic (PV) cell that is able to generate power at night through a process known as radiative cooling. Solar power requires energy storage solutions, 2. Net metering systems offer additional flexibility, 4. Once the sun sets, they stop.

## How to use the solar power generation system at night
