

# How to waterproof the aluminum strips of photovoltaic panels

## Overview

---

High-quality sealing tapes and adhesives are commonly used to waterproof the gaps between photovoltaic panels. These materials are designed to withstand extreme weather conditions and provide a durable seal. Avoiding Corrosion. you could just put a thin piece of aluminum flashing over the "joints" to prevent UV exposure, the top and bottom "H" shaped metal would have the silicon covered by the aluminum anyways. 804 is used for frame sealing, junction box sealing and stuff like that it sticks very well to anodized. Using standard framed panels, you could overlap them to spill water from one to the next below it. Also use a channel below, or maybe caulk, for adjacent panels at the same height. Solar panel waterproofing. Because the average rooftop solar installation requires penetrating the roof multiple times, one of EcoFasten's principles has been to design mounts that protect the roof from water intrusion for the life of the solar array.

### making a waterproof roof out of solar panels

Like the idea of the shared rails between the panels with the cap strip that screws in over the top. I'm sure they are not completely water proof, but curious how good a job they do of keeping out the rain.
