

# Hungarian lithium is banned in energy storage power stations

## Overview

---

Hungary's renewable energy capacity grew by 14% in 2023, with solar projects leading the charge. Will Hungary's new battery energy storage system help Green the grid?

The new facility supports a growing push to green Hungary's power grid. “We are not against progress,” says resident László Nándor Horváth, a full-time father and activist. “But we would prefer another direction. ” He isn't alone in opposing the construction. As Hungary accelerates its national energy transition, 2026 marks a decisive year for residential energy storage deployment. This article explores testing standards, industry trends, and how certified agencies mitigate.

## Hungarian lithium is banned in energy storage power stations
