

Increased renewable energy penetration lusaka

Overview

Zambia has launched construction on a 20MW solar photovoltaic (PV) project at the Natural Resources Development College (NRDC) in Lusaka, as the country accelerates efforts to diversify its power mix and close an electricity supply gap exacerbated by climate shocks. Areas ranging between 50 and 70% coupled with high unemployment levels. Focus will be on increasing electricity generation capacity and promotion of alternative green energy. Zambia's main energy sources include; hydro-electricity, solar, petroleum, coal, and biomass; of all the energy sources, petroleum and its derivatives are the only sources of energy that are wholly imported into the country. With an average of 24 inhabitants per square kilometer, Zambia is amongst the least densely populated countries in the world making distributed renewable energy (DRE) the least cost option for majority of the population living in the rural areas.
