

Installation standard of photovoltaic bracket on sloped roof

Overview

The PV array will have a slope of 5° (standard) or 7° degrees with 11. Ballast blocks are placed in the Ballast Pans to hold the PV array to the roof. An optional Block Bar can be used to increase the amount of weight at each ballast pan. These roof mounted arrays typically feature penetrations into the roof system, which can result in water leakage issues if not properly flashed or applied to the roof system. 2 Structural integrity and durability of the application of the roof mounted array to the roof system must be adequate per. Install a mounting system for solar thermal or solar photovoltaic panels. Choose an appropriate racking and mounting system for the type of PV module, and install the system along. The IronRidge Flush Mount System is an all-in-one mounting solution for residential and commercial pitched roofs – including composition shingle, tile, and metal roofs. CI pecially engineered solar panel roof mounting brackets.
