

Introduction to France s new energy storage power station project

Overview

Built on the site of the former Cheviré fossil fuel power station, which operated between 1954 and 1986, the project replaces a legacy of coal, oil, and gas with a facility designed to stabilise the grid and integrate more renewable power. The 100 MW/200 MWh battery energy storage system (BESS) is connected to the grid with a charge and discharge voltage of 63 kV. It is expected to be fully operational by the end of 2025. UK-based renewables developer Harmony Energy recently switched on its battery energy storage system (BESS) at the. Leading battery storage developer Harmony Energy is set to deliver France's largest battery energy storage system (BESS)—the Cheviré battery project - using Tesla Megapack technology. The 100MW/200MWh Cheviré project, located at the port of Nantes Saint-Nazaire Harbour, is the first large-scale, two-hour duration BESS in France. Discover how the Lyon project sets new standards for grid stability while addressing renewable energy challenges.

Introduction to France's new energy storage power station project

France's Largest Battery Storage System Powers Up

By leveraging cutting-edge technology at the Nantes-Saint-Nazaire port, the project not only bolsters local energy infrastructure but also sets a benchmark for large-scale energy storage ...
