

Is it okay to brush asphalt on photovoltaic panel columns

Overview

While it may seem like a good idea to wax your solar panels in the same way you might wax your car or boat, this is actually a big no-no. Solar panels are designed to absorb sunlight and convert it into electricity through photovoltaic cells. The two common attachment methods are rack-mounted and roof-integrated (RIPV) installation methods. Proper installation of the PV system is critically important to the integrity of your asphalt roof shingles and your roof. This is because the rubber component of EPDM degrades when in contact with any bituminous material, something studies on the molecular interaction of rubber with asphalt have confirmed. As a result, EPDM gaskets should never come in contact with asphalt shingles. A compatible solution Silicone. One rule I use for roof penetrations: If I can see a penetration, it'll leak. The primary protection for. One roofing contractor said that the frame for the panels should be remounted after the old roof is removed but before the new shingles are put in place, and that they would place the shingles around the struts for the panel frame.
