

Is the UK generating enough solar power

Overview

43 billion kWh of solar electricity in 2025, enough to power over 5 million homes. Solar panel installations in the UK hit 1. Renewables now provide 37% of the UK's electricity, surpassing fossil fuels for. Solar power has a growing role in electricity production in the United Kingdom, contributing around 6. The figures, revealed in new Carbon Brief analysis, show that the nation's solar sites have generated a record 7. The UK also just had its sunniest spring since record keeping began in 1910, the Met Office. In the first half of 2025, a low-wind start was balanced by record-breaking solar generation. Clean power generation in the early summer of 2025 displaced gas generation -. Renewables accounted for majority of annual UK electricity generation for the first time in 2024, with solar enjoying record highs despite fewer sun hours Gains for PV reflect increased deployed capacity, which hit 18 GW in February 2025 according to the latest government figures.

Is the UK generating enough solar power

UK Solar Power Surges with Record-Breaking Output in Early 2025

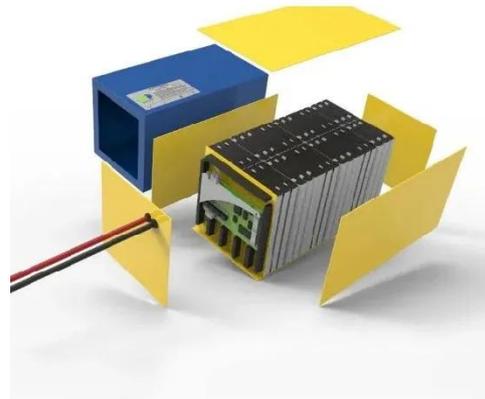

Earlier last month, UK solar achieved a new record by generating 13.2 GW in just 30 minutes - enough energy to supply 40% of the nation's electricity demand at the moment.

Large-scale solar farms
Planning considerations
Government programmes
Future

In 2006, the United Kingdom had installed about 12 MW of photovoltaic capacity, which represented only 0.3% of total European solar PV of 3,400 MW. In August 2006, there was widespread news coverage in the United Kingdom of the major high street electrical retailers Currys' decision to stock PV modules, manufactured by Sharp, at a cost of £1,000 per module. The retailer also provided an installation service.
