

Is there an oversupply of solar glass

Overview

In the face of the rapid development of the photovoltaic industry in recent years, photovoltaic glass, as one of the key raw materials, has seen a sharp expansion in production capacity, but the growth rate of downstream demand has not been synchronized, resulting in a temporary. In the face of the rapid development of the photovoltaic industry in recent years, photovoltaic glass, as one of the key raw materials, has seen a sharp expansion in production capacity, but the growth rate of downstream demand has not been synchronized, resulting in a temporary. Why are solar panel manufacturers drowning in excess photovoltaic glass inventory?

This analysis reveals how policy shifts, production miscalculations, and supply chain dynamics created today's oversupply - and what it means for the solar energy industry. The Perfect Storm: 4 Factors Behind Photov. (Yicai) Sept. 5 -- Major Chinese producers of photovoltaic glass confirmed that they are idling furnaces to reduce output in response to a severe supply glut, but industry insiders are unsure whether this will be enough to restore the balance to supply and demand. Over the past few decades - from when solar PV moved into mass production status - the polysilicon sector was often the. As spot and futures prices continue to decline, the glass industry faces widespread losses. However, capacity reduction remains slow, with daily melting rates still high, and inventory hitting new yearly highs. 08 Million tons by 2031, at a CAGR of 18.42% during the forecast period (2026-2031).
