

Level 1 wind can also generate electricity

Overview

Wind turbines use wind to make electricity. The terms "wind energy" and "wind power" both describe the process by which the wind is used to generate mechanical power. Wind turbines use blades to collect the wind's kinetic energy. Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn. power is a renewable resource because it will never be used up. There are two types of wind turbines:.. Alternative energies include 1) renewable power sources (such as solar, tidal, wind, biofuel, hydroelectric, and geothermal) and 2) nonrenewable nuclear power (considered alternative but not renewable because it relies on uranium, a finite resource not easily replenished).

Level 1 wind can also generate electricity

Electricity generation from wind

Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn. The blades are connected to a drive shaft that turns an electric generator, ...

Energy 101: Wind

Wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, which spins a generator, which creates electricity. The terms "wind energy" and "wind ...

How Wind Turbines Generate Power -- From Blade to Grid

Because power is proportional to the cube of wind speed, a small increase in wind velocity yields a much larger increase in power output. This is why turbines are designed with tall ...

Frequently Asked Questions about Wind Energy

A wind turbine works like a fan but in reverse: instead of using electricity to make wind like a fan, wind turbines use wind to make electricity. The wind turns the turbine's blades, which spin a shaft ...

What is Wind Power? , ND Studies Energy Level 1

Wind power is power created by changing the energy of the wind into a useful form of energy. Wind energy can be used to generate electricity. Early Use of Windmills: This photo from 1922 shows a ...
