

Lightning protection measures for rooftop communication base station inverters

POWER UP INDOORS&OUTDOORS

Overview

The protection of GSM and base station towers from lightning and overvoltage is provided by integrating external lightning systems, internal lightning systems, earthing, equipotential bonding and LV surge arrester protection techniques within the framework of IEC-62305 standard. Recommendation ITU-T K. 112 provides a set of practical procedures related to the lightning protection, earthing and bonding of radio base stations (RBSs). If none exist then follow USA National Electrical Codes known as NEC. · In summary, the components of the lightning protection measures required for grid-connected photovoltaic power stations are: ground light. Grounding resistance must be strictly controlled within standard limits. lightning activity in the area and the characteristics of the equipment. disperse lightning current, forming.

Lightning protection measures for rooftop communication base station

Basics of Lightning Protection for Communication Towers

For lightning protection best resources are Polyphasers book the ARRL Handbook along with the book "Grounding and Bonding for the Radio Amateur". The ARRL Handbook contains good electrical ...
