

# Lima Airport uses ultra-large capacity solar-powered outdoor cabinets

## Overview

---

Each battery energy storage container unit is composed of 16 165. 89 kWh battery cabinets, junction cabinets, power distribution cabinets, as well as battery management system (BMS), and the auxiliary systems of distribution, environmental control, fire protection, illumination. Focusing on the chiller systems, a staggering 22% energy savings were achieved immediately after the installation of our Eniscope solution, and subsequently another 1,417 circuits have been installed across the airport. This has given the energy management team minute-by-minute data at their finger. From India to Australia, California to Germany, airports are installing vast solar arrays across terminal rooftops, parking structures, and unused land. These installations range from supplementary power sources to full-scale systems capable of meeting an airport's entire energy demand. Intelligent power generation: intelligent peak. Most industrial off-grid solar power systems, such as those used in the oil & gas patch and in traffic control systems, use a battery or multiple batteries that need a place to live, sheltered from the elements and kept dry and secure.
