

Lima wastewater treatment plant uses outdoor telecom cabinet hybrid type

Overview

This compact solution integrates essential components like OLT, a 48V DC power supply, fiber ODF modules for subscriber connections, and an EMS (Environmental Management System) to monitor conditions. The City of Lima Wastewater Plant treats an annual average of just over 13 million gallons of sewage a day and can treat a peak flow of 70 million gallons per day. The treatment plant receives a combination of domestic and industrial sewage as well as storm water. Approximately 60% of the city's. Westell is a collaborative partner in OSP deployment optimization providing customized, fully integrated, vendor neutral outdoor network equipment enclosures. With proven expertise in system integration, Westell also manages the details for design assistance, planning, thermal management. The Hybrid outdoor cabinet offers a streamlined alternative to traditional POP (Point of Presence) stations for telecom applications. Durability:. Whether it be storm sewer runoff or drainage from home or business use, once water leaves the drain, it enters a complex network of underground pipes. And once processed at a wastewater facility, that water typically completes its journey by emptying into a lake or river. Efficient water/wastewater. For all of those reasons, today's efficient wastewater treatment plants are basing their communications network infrastructures on ultra-reliable, high-speed fiber optic cabling coupled with connection and control devices that are designed to withstand the harsh environments within those plants.
