

Lome electricity generation

Overview

Today, the country is generating significantly more power with a 100-megawatt plant in Lomé, the country's capital, that runs on natural gas and other fuels. Investment is flowing into the country, bringing jobs and development, including a much-needed port renovation. At that time, the nation had only 85 MW of installed capacity. The small West African country of Togo had one of the lowest per capita rates of electricity generation in the world. In 2006, demand for electricity was nearly twice as high as production, and the shortage of domestic energy was exacerbated by growing demand for electricity throughout the region. Kékéli Thermal Power Station, also Kékéli Efficient Power Station, is a 65 MW (87,000 hp) natural gas -fired thermal power plant located in the city of Lomé, the capital of Togo. [1] The power station is located in the neighborhood known as Kékéli, located in the area of the Port of Lomé.
