

Mexico solar energy storage system

Overview

Recognizing this, in March 2025, Mexico's government announced a mandate requiring all new solar and wind power plants to include storage systems equivalent to 30% of their capacity, with the goal of adding 574MW of batteries by 2028. Mexico is featured in the White Paper on Energy Storage in Latin America and the Caribbean, published by the Latin. CRE regulation integrates batteries, intermittency management and grid operation backup through energy storage. Electric energy storage has become a crucial component in the transition to more sustainable, reliable and efficient energy systems. Advancements in battery technology, particularly lithium-ion batteries, are leading to significant cost. The Mexico energy storage system market is experiencing significant growth driven by an increasing focus on renewable energy integration and grid stability.
