

National subsidies for installing solar panels

Overview

The most common solar tax incentive is called the Investment Tax Credit (ITC). The ITC — also known as the Federal Solar Tax Credit — is a popular tax rebate program offered by the US Federal Government for homeowners looking to switch to clean, renewable solar power. Whether you're a low-income homeowner or a rural resident, there are plenty of grants and funding options in 2025 to make solar energy accessible, affordable, and efficient. Established in 1995, DSIRE is operated. The Solar Energy Technologies Office (SETO) does not provide financial assistance to companies or individuals to install solar systems. These financial incentives—think tax credits, grants, and rebates—are all about making it easier for you to install solar panels, which can help you save on those. Installing solar panels is a big investment, but government incentives for solar panels can significantly reduce the cost.
