

# New energy storage power supply industry analysis

## Overview

---

Cost breakthroughs in lithium-iron-phosphate batteries, long-duration storage mandates in China, and the U. Inflation Reduction Act's standalone storage investment tax credit are driving a structural pivot from backup-only use toward multi-hour arbitrage and ancillary-service. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest. The Energy Storage Market size in terms of installed base is expected to grow from 0.52 Terawatt by 2031, at a CAGR of 23.05% during the forecast period (2026-2031). Installations passed 100 GW for the first time – a.

## New energy storage power supply industry analysis
