

No brand of photovoltaic panels can be used

Overview

Here's the thing: solar companies can make changes under certain circumstances — but only in very specific, legal ways. When they swap your panels without clear, informed consent in writing, it can be a breach of contract, a deceptive trade practice, and a direct hit to the return on. When expanding or upgrading a solar panel array, many people often wonder if they can mix panels from different manufacturers. While it is technically possible to add panels from various brands to an existing array, there are several factors to consider before doing so. With solar panels designed to last 25-30 years, selecting a reliable manufacturer with proven performance can mean the difference between decades of worry-free energy production and costly. High-quality panels from a reputable manufacturer can last decades and save you a great deal on electricity costs over the years.

No brand of photovoltaic panels can be used

6 Best Solar Panels for Homes (2026) , Today's Homeowner
