

# North American residential energy storage inverter power

## Overview

---

This paper covers residential ESSs, which are installed at homes to store energy for later use, such as at night when a solar photovoltaic (PV) system is not producing electricity or when there is a power outage (figure 1). With a record-breaking 346 MW of residential storage built in Q3 2024 — a 63% increase over the previous quarter — the residential energy storage market has reached an all-time. North America is the fastest-growing region, driven by rising demand for energy independence and renewable solutions. Among the product types, the Simplex segment holds the largest market share at 55%, driven by its affordability and efficiency for residential applications. However, Three Phase. Houston/WASHINGTON, D. energy storage market set a record for quarterly growth in Q2 2025, with 5.6 gigawatts (GW) of installations, according to the latest U.S. These systems provide. Increasingly today, the solution to those rolling blackouts is not bigger power plants: the humble home battery. When industry professionals discuss BESS equipment, conversations naturally gravitate toward battery chemistry, inverter technology, and software controls.
