

Overview

Yes, you can install solar panels on a north-facing roof, but efficiency will be lower compared to south-facing panels. This design choice may appeal to system owners who prioritize maximizing monthly energy yield over achieving the shortest possible payback period. Does that ever make sense?

About 20% of panels were on the front of the home, which faces south. While south-facing orientations have traditionally been favored in the Northern Hemisphere for optimal sunlight exposure, advancements in solar technology have demonstrated that north-facing solar modules can still be a viable and efficient solution. I wrote this guide to give you the complete picture based on real project data, manufacturer specifications, and hands-on experience with.

North bottom solar photovoltaic panels

North Facing Solar Panels: Are They Worth It?

If you want to mount solar panels on a North facing rooftop then you should consider the pitch of your roof. A steep pitch will deliver a very poor performance in this scenario as very little sunlight will ever ...
