

Off-grid mobile energy storage container for Australian farms

Overview

Browse our range of containerised off grid systems for commercial sites. Power where the grid can't go — delivered in a single, rugged container. MyEnergy designs and builds turnkey off-grid systems inside 10-, 20- or 40-foot containers, pre-wired, factory-tested and ready to run the moment they land on site. Did you know that your rooftop can generate up to three times more solar. The Hybrid-Ready Container Solution is a modular product in a series of products enabling full distributed energy plant deployments anywhere with enough open space to support solar energy. These self-sufficient units are ideal for powering off-grid operations, mobile businesses, events, and remote projects—all while reducing. There are two major savings you can make by transitioning to a mobile solar hybrid system: The cost of connecting to the grid: In remote areas (and even in more urban ones) connecting to the grid can quickly add up.

Off-grid mobile energy storage container for Australian farms

Our container solution with Solar power, Battery and more

Whether you're powering a remote agricultural site, supporting early-stage infrastructure, or replacing diesel on a mining project, our container delivers solar power -- all in one rugged, transportable unit.
