

Patented solar bracket technology

Overview

The patent US12031750B2 describes a mounting system designed for power-generating devices, particularly photovoltaic modules. The system features a frame that includes an opening on its lateral side, and a bracket mounting assembly that consists of a top member and a clamp. Recently, following rigorous review by the National Intellectual Property Administration, SOEASY's independently developed " 3D Solar Mounting Structure " has been officially granted a national invention patent (Patent No. This marks another significant breakthrough for. A solar module mounting system includes a solar module bracket comprising a central panel, first side panel, and second side panel that together form a U-shaped configuration defining a channel for receiving a back rail of a solar panel module. The bracket comprises a photovoltaic panel supporting frame and a plurality of lower supporting frames, wherein each lower supporting frame has a base, a first upright column, a second upright column and a diagonal brace; each first upright column. Klockner & Co has been granted a patent for a structural bracket designed for solar mounting systems. delivers the speed and simplicity installers want, with the strength and adaptability they need. and preassembled components that reduce parts on the roof. The foldable PV coupling assembly may fold/unfold.
