

# Peak shaving and valley filling energy storage system brand

## Overview

---

The **Tiangong Energy** has recently launched a multi-core complementary intelligent control energy storage solution that supports both lead-acid and lithium batteries. This system significantly reduces electricity costs while enabling remote monitoring and peak shaving. Peak shaving refers to reducing electricity demand during peak hours, while valley filling means utilizing low-demand periods to charge storage systems. Together, they optimize energy consumption and reduce costs. In the power system, the energy storage power station can be compared to a reservoir, which stores the surplus water during the low power consumption period. This energy storage project, located in Qingyuan City, Guangdong Province, is designed to implement peak shaving and valley filling strategies for local industrial power consumption. Its design allows for **plug-and-play** installation, facilitating rapid deployment in various scenarios such as economic mode peak shaving, demand management, backup power systems, and.

## Peak shaving and valley filling energy storage system brand

---

### How Can Industrial and Commercial Energy Storage Reduce ...

Among the most effective strategies are peak shaving, valley filling, and energy-saving cost reduction. This article explains how these techniques work and how C& I energy storage ...

## What Is Peak Shaving and Valley Filling?

Valley filling is the quieter sibling of peak shaving. It means using cheap, off-peak electricity when demand is low (typically at night), and storing it or shifting operations to those periods.
