

# Photovoltaic module 182 panel size

## Overview

---

These solar cells have a cell size of 182mm x 182mm (approximately 7. They are commonly referred to as “high-efficiency” cells and are often used in the production of monocrystalline solar panels. In 2019, LONGi Green Energy is the first to launch M6 wafers with a size of 166mm x 166mm, which can increase single wafer power and module power density and reduce system costs compared to the traditional 156mm x 156mm wafers. These larger, more efficient solar panels are quickly becoming the new standard for solar installations. Note: Your Enquiry will be sent directly to Shenzhen Topsy Energy Co. (Leapton Solar) Solar Panel Series LP182\*182-M-60-NB 480-500W. Detailed profile including pictures. With the continuous updating of larger wafer size solar cells, bigger size and higher efficiency PV modules are researched and produced by many solar manufacturers using 210 mm or 182 mm silicon wafers, especially in the second half of 2021.

## Photovoltaic module 182 panel size

### Why Solar Cells Have A Fixed Size:182 Or 210

The 182 modules is said to have a half-sheet design, which allows for lower currents, resulting in higher efficiency and lower hot spot temperature rise and internal consumption.
