

# Photovoltaic panels Caoshan farming

## Overview

---

Expansive arrays of deep blue solar panels now stretch across the plateau, harnessing abundant sunlight to generate clean energy. Beneath their shade, pasture grass flourishes, and sheep graze and play freely in what is emerging as a vibrant new savanna. Here, solar photovoltaic (PV) panels were installed several meters above the water, helping to generate an annual 260 gigawatts-hours of energy — enough to power. A flock of sheep graze between solar panels at a solar photovoltaic power plant in Gonghe County, Hainan Tibetan Autonomous Prefecture in northwest China's Qinghai Province, Ap. (Xinhua/Zhang Long) For generations, the Talatan Gobi Desert in northwest China's Qinghai Province has. Solar grazing beneath photovoltaic panels in China's Qinghai Province provides herders with productive pastureland while renewable energy installations generate clean electricity. Photo by Xinhua/Zhang Long courtesy of the State Council Information Office, The People's Republic of China. This initiative leverages the natural behavior of sheep to maintain healthy grasslands while utilizing solar energy to power. Combining agriculture with solar energy, agrivoltaics offers a promising solution to reduce carbon emissions while boosting food production.

## How solar panels and sheep are greening Qinghai's desert

Thanks to an innovative combination of solar panels and grazing sheep, vegetation is thriving and the land is coming back to life. The solar panels

shield the soil and provide shade, while the sheep naturally ...
