

# Photovoltaic panels on the loader side

## Overview

---

A backfeed breaker can be used to connect a solar PV system to the load-side of a service. There are several different ways this can be done per the NEC but the most common method for solar residential installs is by connecting it to the end of a busbar using the 120% rule (705. 12. In two editions of Code Corner, Ryan Mayfield with Mayfield Renewables, explains busbar, load side interconnections in 705. If you have no idea what that means, read on. The alternative is a "LINE OR SUPPLY-SIDE" connection made BEFORE the main breaker. The most common method, the load-side connection, is governed by. Choosing between a supply-side (line-side) or load-side (breaker-based) connection impacts not only your system cost and complexity, but also code compliance and inspection outcomes.

## How to connect a PV solar system to the utility grid

There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. The most common is a "LOAD SIDE" connection, made AFTER the main breaker.
