

Photovoltaic panels on the roof of East Station

Overview

This article explains how solar panels on an east-facing roof perform, design strategies to maximize energy yield, cost and incentive considerations, and practical installation tips for homeowners and installers. The orientation of a roof affects photovoltaic system performance, and an east-facing roof presents unique opportunities and trade-offs for solar panels. While south facing roofs typically maximize annual output, east facing installations can deliver strong morning generation that aligns with early household. Will solar panels work on an east-facing roof?

Yes! The orientation exposes them to direct sunlight. Since solar panels are mostly installed on roofs, it matters which direction the roof faces for maximum solar electricity production. Still, you can install solar panels on a majority of roofs. Latitude-Based Angle Calculation.
