

# Photovoltaic panels with central air conditioning

## Overview

---

In simple terms, solar ACs use solar panels to power the air conditioning system. They convert this energy into power. That power either goes directly to the air conditioner or to a battery where it's stored until the AC needs it. Whether you're looking for a standalone AC unit or a central heating, ventilation, and air conditioning (HVAC) system, choosing one of the best solar-powered AC units can help you reduce your carbon footprint and save money on utility bills. Photovoltaic (PV) modules are very powerful, and are capable of running A/C units, delivering enough power to cool rooms for several hours using solar power. Separately, solar thermal air conditioners utilize built-in solar heat collectors and refrigeration systems to cool a space in. The most common solar air conditioner design uses photovoltaic (PV) panels to power the compressor and fan.
