

Planting under land photovoltaic panels

Overview

Agrivoltaic farming is the practice of growing crops underneath solar panels. It works by placing solar panels high above crops. The. Proper planning for the use of land within a solar array is critical to a successful project. Options exist from very low maintenance management of ground cover to more intensive agricultural production systems. Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath. Agrivoltaics is the combined use of solar panels and agriculture under the panels that together use less energy and produce more crops.

Planning and Managing Permanent Vegetation Under Solar Arrays

Existing Site Conditions
Pre-Construction Actions
Plant Species Selection
Post-Construction Considerations
To date, the most common plans for vegetation management under solar arrays are mechanical control (mowing), grazing sheep, and pollinator habitat, or a combination of these three. In almost every scenario a mixture of different plant species will provide more desirable outcomes than a monoculture. Mixtures provide diversity in growth habits with a See more on blogs rnell Department of Energy
