

# Power generation of 90

## Overview

---

Renewable energy sources accounted for almost 90% of new electrical generating capacity in the United States added in the first nine months of 2024, with solar accounting for 78% of new capacity. That's according to data newly released from the Federal Energy Regulatory Commission. This growth was driven by a mix of renewable sources, including biomass. The U. The report also looks at retirements, planned retirements, and cancellations since 2017. In 2024, the United States. This page provides current information on long-term planning in the ERCOT region. This page offers publicly accessible documents detailing ERCOT's modeling processes for both Market Participants (MPs) and public.
