

Price of Photovoltaic I-beam Support

Overview

Steel I-beam installation costs around \$3,200, on average, but prices can fall anywhere between \$1,000 and \$20,000, depending on the length of the beam you need and whether you're including it as part of new construction costs or a home renovation. Solar Panel Photovoltaics Galvanized Steel Mounting and Support Structures The solar panel photovoltaic support and mounting structures are generally made of I-beams, C-type beams, CHS, SHS and RHS beams and other steel materials with customized drawings and designs, the solar panel steel. Calculate the cost of steel I-beams based on weight, length, and current market prices. This calculator provides a cost estimate for steel I-beams based on dimensions, material, fabrication requirements, and current market prices. Add to inquiry basket to compare. Replacing a load-bearing wall with a support beam costs \$4,000 to \$10,000. Steel I-beam prices are \$6 to \$18 per foot for just the materials. Extra costs apply for knocking down walls. The unique I-beam design of SolarMount-I optimizes strength, eliminates excess material found in other systems, and offers a cost effective solution as low as 10 cents per watt.
