

# Principle of rooftop solar power generation equipment

## Overview

---

A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. An indicator consistently between 2006 and 2012. [1] The various components of such a system include photovoltaic modules, mounting. A Rooftop Solar Energy system consists of several important components that help provide clean solar electricity for homes and businesses. There are several types of rooftop solar panels available.

### Principle of power generation of rooftop solar power station

Rooftop solar PV systems are distributed electricity generation options, which help to meet a building's energy needs, or provide electricity within an existing distribution network.

### Rooftop solar power

Rooftop mounted systems are small compared to utility-scale solar ground-mounted photovoltaic power stations with capacities in the megawatt range, hence being a form of distributed generation.
