## Overview

---

All solar thermal power systems have solar energy collectors with two main components: reflectors (mirrors) that capture and focus sunlight onto a receiver. In most types of systems, a heat-transfer fluid is heated and circulated in the receiver and used to produce steam. In most. The generation of thermal energy from solar can be realized using various solar reflecting collectors. Sun is a gigantic star, with diameter of 1. Solar energy is the cleanest and most abundant renewable energy source available, and the U.
