

Raising sheep under the photovoltaic panels on the hillside

Overview

Solar grazing is an innovative practice gaining momentum across the United States, where sheep graze beneath and around solar panels on solar farms. Solar shepherds, who manage sheep grazing under solar panels, are part of a growing movement that combines agriculture and renewable energy — and offers high incomes in the process. Known as solar grazing or solar farming, this approach reduces heat stress and. What began with 30 sheep on their family farm turned into a flock of 1,300, which wouldn't have been possible without the help of agrivoltaics to boost their income. It preserves agricultural land, reduces costs and benefits both farmers and energy companies. Lara, who studied animal science at Universidade de São.

Raising sheep under the photovoltaic panels on the hillside

**Efficient
Higher Revenue**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPPT Trackers, 150% DC Input Overvoltage
- Max. PV Input Current 16A, Compatible with High Power Modules

**Intelligent
Simple O&M**

- IP65 Protection Degree: support outdoor installation
- Smart 1 V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

**Flexible
Abundant Configuration**

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation

Grazing Under Solar Panels: A Revolution in Agriculture and Energy

The combination of solar panels and sheep grazing is not only economically advantageous but also ecologically beneficial. Research shows that solar panels can increase ...
