

Regulations on the Construction and Management of Supercapacitors for Communication Base Stations

Overview

Displaying title 47, up to date as of 1/30/2026. Nomenclature changes to part 1 appear at 63 FR 54077, Oct. 6100 Wireless Facility Modifications. (a) [Reserved] (b) Definitions. (1) Base. · Miniature asymmetric supercapacitors have higher voltage and energy density but are often limited by a complex manufacturing process and difficulties in further miniaturization. The current national policies and technical requirements related to electromagnetic radiation administration of mobile communication base stations in China are described, including laws and regulations on electromagnetic radiation management, electromagnetic environmental impact assessment system. Electric double-layer capacitors (EDLC) (aka supercapacitors), however, offer clean energy storage without the safety concerns, do not use heavy metals, and are much simpler in terms of power management. This whitepaper discusses the construction of supercapacitors, their principles of operation. Environmental impact statement form and the environmental impact registration form shall track and inspect the environmental impact of a construction project after it is put into production or use. Amendments to new version of the "Classified Management Directive environmental impact registration form. These Regulations are promulgated pursuant to Paragraph 3, Article 46 of the Telecommunications Act (hereinafter referred to as the "Act"). The National Communications Commission (NCC) is the competent authority of the Regulations.
