

Renovation of old solar panels

Overview

This comprehensive guide explores everything you need to know about solar panel retrofitting – from initial assessment and design considerations to installation processes and financial planning – helping you make an informed decision about powering your home's future. Retrofitting is more than hanging panels on the roof; it's the act of diagnosing. Solar panels are built to last, but their performance gradually degrades. On average, panels lose about 0.5% to 1% of efficiency per year. After 15–20 years, this adds up to a noticeable drop in output. Finding responsible end-of-life solutions is crucial for maintaining solar energy's green. Retrofitting an old home with solar panels isn't just about slapping some panels on the roof. Evaluate Your Current Solar System's Performance Before upgrading, start by assessing your system's efficiency.
