

Restrictions on wind power generation in scenic spots

Overview

New report and interactive map provide a detailed look at the diversity of renewable energy siting and permitting regulations and processes across the United States, profiling all 50 states plus Puerto Rico. Electric power generation from wind from 2014 to 2023 has more than doubled, rising from 18.1 to 36.7. Wind energy ordinances adopted by counties, towns, and other types of municipalities are one of the best ways for local governments to identify conditions and priorities for all types of wind development. Secretary of the Interior Doug Burgum signed a Secretary's Order to more efficiently manage our nation's energy resources by permitting projects that optimize energy generation while minimizing their environmental impact. By 2024, there were approximately 1,500 utility-scale terrestrial wind energy projects that include more than 76,000 installed wind turbines located in at least 45 states, totaling 155 gigawatts in electrical.
