

# Rural photovoltaic panel policy

## Overview

---

Agrivoltaics – the co-location of solar energy installations and agriculture beneath or between rows of photovoltaic panels – has the potential to help ease this land-use conflict. To address climate change, the Biden-Harris Administration set a goal to decarbonize the electricity. Large part by its cost-competitiveness in the marketplace. American Farmland Trust's (AFT) Farms Under Threat 2040 solar modeling projects that, without policy intervention, 83% of new solar development is expected to occur on farmland and rangeland (agricultural land), with almost half on America. There is a patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact your project development. It is important to understand the policy landscape early in your development process. State Solar Carve-Out Programs - Learn about which states. “Our prime farmland should not be wasted and replaced with green new deal subsidized solar panels. One of the largest barriers of entry for new and. The federal government and all states need to recognize that agrivoltaics can help to overcome local opposition to solar development for fear of losing active farmland. As shown in Map 1, roughly 18% of ground-mounted PV facilities in the U.
