

Safety agreement for grazing sheep in photovoltaic panel areas

Overview

This report was prepared by WSP USA and Agrivoltaic Solutions LLC in the course of performing work contracted for and sponsored by the New York State Energy Research and Development Authority (hereafter “NYSERDA”).

“Covered Vegetation” are determined by the contracting parties. Similar to Option 1, the obligation under Option 2 means that in the event that the sheep do not achieve the vegetation standard for Covered Vegetation set forth in Section 1(b) of the contract, the sheep farmer is responsible for. Adam Sotirakopoulos, Enel North America's Head of Operations & Maintenance for Solar (Zone 1), reflects on the story behind our sheep grazing program—recently named a Fast Company World Changing Idea. Adam is the Head of Operations and Maintenance for Solar (Zone 1) and has been with Enel North. Discover how solar grazing with sheep under PV panels can transform land management and energy efficiency, revealing benefits you won't want to miss. Using livestock to manage vegetation at solar sites can enhance site value by keeping land in agricultural use, providing new income streams for local farmers, and adding environmental benefits such as combining agriculture with renewable energy.
