

Should China s solar charging solar energy storage cabinet

Overview

In February 2025, China shelved a requirement that new domestic wind and solar projects be bundled with energy storage. Instead, they now had to. Solar and storage prices are about to rise after a year and a half of record lows, according to new data from Wood Mackenzie. Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last. With clean energy projects no longer needing to be bundled with energy storage, companies are finding new opportunities at home and abroad. This position was driven by a combination of market need for balancing renewable energy and government efforts to build a “ new power system ”. These systems are essential for balancing supply and demand, enhancing grid stability, and facilitating the integration of intermittent renewable sources like solar. Let's face it —solar panels are like the introverts of renewable energy. With a booming \$33 billion global energy storage. China's energy largest storage facility, with rows of white batteries similar to containers lined across on a field in Shandong province, was connected to the grid last Saturday.
