Overview

Always use #6 AWG bare copper wire for outdoor grounding to meet National Electric Code requirements and pass inspections. This simple yet critical detail can save you time, money, and headaches down the road. Grounding (also known as earthing) is the process of physically connecting the metallic and exposed parts of a device to the earth. It is a mandatory practice required by NEC and IEC codes to protect both equipment and personnel from damage and electric shock hazards. But there's much more to this story. You'll often find conflicting information on the proper way to ground solar panels. In this guide, we'll walk you through the ins and outs of solar. Photovoltaic grounding is a key element of a photovoltaic system, ensuring its safety and reliability.
