

Solar MES System

Overview

The new version of the manufacturing execution system FabEagle® MES offers three important new features that are specifically designed to meet the requirements of dynamically growing solar cell and solar module manufacturing with production capacities of at least 1 GW. Improve the formulation and adjustment of production plan Speed up the feedback speed of production plan execution Improve the quality control in the production process Greatly improve the real-time data reporting capabilities of enterprise Eliminate the information island in the enterprise. Our Manufacturing Execution System FabEagle®MES, offers high-performance production control and comprehensive data acquisition for the photovoltaic (PV) and battery industries. In these sectors, every percentage of uptime and efficiency matters. We're here to help you achieve manufacturing. in the world in Frankfurt (Oder). Since 2008, production has been running at full speed and every day more than 3,000 premi m modules roll out of the. Opcenter Execution Semiconductor (Opcenter EX SM, formerly Camstar Enterprise Platform) integrates automation islands and decoupled systems and enables manufacturers to take the next step in digitalization as a basis for future innovation.

Solar MES System

Industry 4.0

PV cell manufacturers typically rely on data sent to Manufacturing Execution System (MES) to retrieve information on the machine status and performances, but this requires a complex IT infrastructure ...
