

# Solar inverter charging control

## Overview

---

If an inverter is to be used as part of a solar system with batteries, then an additional component called a charge controller will be part of the inverter. A charge controller is a device that regulates voltage and/or current to keep the batteries from overcharging. Integrated Systems Deliver Superior Value: All-in-one solar charge controller inverters typically cost 15-20% less than equivalent separate components while offering simplified installation and better component communication, making them ideal for most residential and RV applications. Having tested dozens, I can confidently say that the Innisle 3600W Solar Inverter 24VDC to 110V/120VAC stands out. Below is a summary table to. A solar power system isn't complete without a solar inverter and charge controller. However, it may be more expensive.
