

# Solar lights photovoltaic panels are not generating enough electricity

## Overview

---

There are numerous possible causes of failure of the solar panels. Panels can also fail owing to electrical issues such as poor wiring or inappropriate. Real-world performance expectations: Solar panels typically achieve only 75-85% of their rated capacity under normal conditions due to temperature effects, inverter losses, and varying weather patterns—this is completely normal and not a sign of system failure. Soiling is the #1 culprit: Dirt. One of the most common complaints we hear from homeowners is that their electricity bills are still high because their new solar panels are not producing enough power. You were sold on a specific level of performance, and if your system isn't meeting that promise, it's a major problem. This can lead you to question - why are my solar panels not producing enough. According to the National Renewable Energy Laboratory (NREL), solar systems typically operate with over 95% reliability, meaning issues are usually preventable or easily diagnosed.

## Solar lights photovoltaic panels are not generating enough electricity

### What if my solar panels don't produce enough power?

What if my solar panels don't produce enough power? When we're designing your solar system, we make sure it fits your household electricity needs to a tee, helping maximize your ...
