## Overview

---

Molten Salt Solar Power Tower Technology is an advanced concentrated solar power (CSP) system that utilises molten salt as both a heat transfer and storage medium. By using solar radiation to heat a. At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWhel. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power. Completed the TES system modeling and two novel changes were recommended (1) use of molten salt as a HTF through the solar trough field, and (2) use the salt to not only create steam but also to preheat the condensed feed water for Rankine cycle. It can reach temperatures as high as 565 degrees Celsius and is used to boil water when electricity is needed. The power cycle has steam at 574°C and 100 bar. The plant can feed remains their most significant disadvantage. from a "cold" storage tank through the.
