

# Solar panels cannot drive small generators

## Overview

---

In short, no, you cannot directly connect a solar panel to a generic fuel-powered generator. However, contrary to popular belief, solar panels actually can't send electricity to your house when the grid is out. Why?

Well, it's a safety thing. Grid-tied solar panels send electricity to utility lines, and if they aren't shut off during a power outage, they would continue to send electricity. Solar panels and generators can be used together to provide backup power during outages or periods of low sunlight.

## Can a home with solar panels use a generator?

How Do Gas-Powered Generators Work? Do Solar Panels and Generators Work Together? Is A Standby Generator Or Solar Battery System Better For You? Do You Really Even Need Backup Power with Your Solar Panels? Here's the deal - even if you have a standby generator hooked up to your home, your solar panels aren't going to turn on when the grid is down. Unfortunately, you cannot run your home with both solar power and generator power at the same time. In other words, the generator and the solar panels cannot operate parallel to one another.
