

# Solar panels orbiting the planet

## Overview

---

Putting photovoltaic power plants into orbit in order to produce solar energy more efficiently, 24 hours a day and regardless of weather conditions, so we can use it on Earth: that's the goal of the European Space Agency's SOLARIS project, which has Enel among its partners. Technicians attach the five-panel solar arrays to NASA's Europa Clipper spacecraft inside the Payload Hazardous Servicing Facility at the agency's Kennedy Space Center in Florida on Friday, Aug. Credit: NASA/Kim Shiflett After crossing the Atlantic from Europe and months of inspection. The startup Reflect Orbital plans to launch a constellation of orbiting mirrors to beam sunlight to solar power plants on Earth after dark. The European Space Agency is investigating whether orbiting solar arrays could beam renewable energy to Earth, as shown in this artist's illustration. 6-mile-wide solar power station in geostationary orbit, 22,370 miles above Earth, capable of generating energy equivalent to all Earth's oil reserves in one year.
