

Solar panels power generation in rural Guatemala

Overview

Guatemala's government is actively advancing its rural electrification program, placing a significant emphasis on renewable energy sources. Relatively high levels of solar irradiance and large areas of cleared land give the country a strong potential for increased solar energy development. BMR Energy acquired the Green Solar. The 5 MW Don Jorge solar project sets a benchmark for Guatemala's distributed renewable generation model, deploying Huawei FusionSolar technology to avoid 13,000 tonnes of CO₂ emissions. As the country aims to reduce reliance on fossil fuels and stabilize its grid, energy storage systems are becoming critical.
