

Solar photovoltaic panel a-grade panel

Overview

Grade A: These panels use the highest quality cells that are free of visible defects. They are suitable for standard installations like ground-mounted power plants, distributed systems, and residential applications. Grade B has some visual flaws but still meets. In a price-sensitive solar market, it's easy to assume that all solar panels are the same — after all, they look similar, claim the same wattage, and promise to lower your electricity bill. The cost gap is also very large. So what kind of solar panel is called A grade, and what kind of solar panel is called D grade?

Below, Qingdao Xianghong. Understand the differences between A, B, C, and D grades, and learn the factors to consider when judging the appearance and purchasing solar panels.

Solar photovoltaic panel a-grade panel

How to Identify the A, B, and C Grades of Solar Panels

The grades of solar panels can be divided into A grade, B grade, C grade and D grade, and A grade solar modules can be divided into two grades, A+ and A-. The cost gap is also very large.
